

InfoSphere Federation Server

Voice-over	Suggested on-screen visuals / text
<p>1. When data sources exist as disparate silos of information, it's hard to gain an integrated, complete view of your business. But data federation provides a cost-effective way to increase visibility across lines of business.</p>	
<p>2. IBM InfoSphere™ Federation Server, part of the IBM InfoSphere portfolio, federates data from diverse sources, such as the mainframe, relational data sources, message queues, Web services, and files.</p>	<p>IBM InfoSphere™ Federation Server</p> <p><<show data being federated>></p> <ul style="list-style-type: none"> • Mainframe • Relational data sources • Message queues • Web services • Files
<p>3. Leveraging consolidated information increases ROI. In an SOA environment, for example, information can be requested from a virtualized data services layer for a single, unified view.</p>	<p>.... Increase ROI</p> <p>.... single, unified view</p>
<p>4. And federated data in the data warehouse can be easily accessed, thus providing a complete, consolidated view of your business.</p>	<p><<illustrate accessing data from data warehouse>></p>
<p>5. Virtualized real-time access to disparate data sources can increase business visibility to help ensure continued cost savings in any economic climate.</p>	<p>IBM InfoSphere™ Federated Server</p> <p>... cost savings with virtualized real-time access to disparate data sources</p>
